

The task force met at the conclusion of the school year to review the transition into the new science wing, and to discuss future steps and moves that are upcoming for NHS.

There were some recommendations that will be reviewed by Building and District Administration along with AVB-Triangle to determine the feasibility and timing of these precautionary steps.

They are:

- ✧ Preparations for students and staff in all new refinished areas – including increased air intake and filter replacement prior to occupancy, particulate matter testing, technology burn-in and video screen deployment, and CO monitoring in the fall will resume upon occupancy.

There were some additional topics discussed without any recommendations:

- ✧ Transition plans for students, staff and community members in the fall.
- ✧ Timelines for moving and occupancy of the various portions of the building.
- ✧ Community open house in conjunction with the Fall Orientation on September 22nd.
